

## PS4 REFLEX V3.6 Instruction Manual

### OVERVIEW

The Reflex V3.6 allows you to add up to 4 Reflex buttons/paddles to your controller. These Reflex buttons can be mapped to any single standard controller button or to multiple controller buttons at once. This can be useful for games which require pressing multiple controller buttons at the same time to perform an action.

Additionally each reflex button has a turbo option with 3 different speed settings, great for ramping up power in sports games, performing special in fighting games or firing in FPS games.

### DEFAULT BUTTON CONFIGURATION

When first using the mod or after a master reset the reflex buttons on the controller will function individually as one of the 4 action buttons (Triangle, Circle, Square and X). The button locations can vary depending on installation and qty of buttons installed. However using the programming mode below you can change the reflex button assignment to be any controller button you like.

### PROGRAMMING MODE

Within the programming mode you can setup the reflex buttons for different button assignments and also for different turbo settings.

- To Enter the programming mode HOLD R1 + R2 + L1 + L2 for 8 seconds, the LED will make one long flash.

- To Configure a reflex button for standard button remapping, press and hold a reflex button, while holding tap any button you would like to assign, this can be multiple buttons if you like.
  - Example 1: Hold reflex button, tap triangle, release reflex button. When the reflex button is pressed, Triangle will be pressed on the controller.
  - Example 2 : Hold reflex button, tap X, tap R1, tap UP on D-pad, release reflex button. When the reflex button is pressed, X, R1 and UP are all pressed on the controller at the same time.

- To make a reflex button turbo hold DOWN on the D-pad and tap the reflex button you would like to make turbo. There are 4 setting that will be cycled through as you tap the reflex button. The LED will flash 1-4 times to indicate the setting.
  - 1 Flash = No Turbo
  - 2 Flashes = 5sps Turbo
  - 3 Flashes = 10sps Turbo
  - 4 Flashes = 15sps Turbo

- To exit the programming mode and save your configuration just tap the touchpad.

### MASTER RESET

To reset the mod to default settings, turn off the controller hold X + Triangle + Circle + Square and turn on the controller. You will see the LED flash very fast 10 times.
